Support Note: ModBus Provider Setup

Add a ModBus Provider Selection in Plant Manager

We've added the TCP Modbus provider to support both PLCs (Schneider / Allen Bradley.)

The Modbus provider is hidden by default, but can be turned on if you add a new Boolean option named **ModbusIOEnabled** to the **Root > Options** key. If the option is set to **True** then the Modbus provider will display in the Plant Manager device list when adding or editing DMI hardware.

### *To add Options Key ModbusIOEnabled*

1. Navigate to the EFI \ Plant Manager directory as shown below. Then run **PlmConfigEd.exe** to open the Auto-Count Plant Manager Config Editor.

2. Select the **Options** key. From the menu, select **Edit > New Value > Boolean**.

3. Add the value **ModbusIOEnabled** and set the Value to **True**. Click **OK** to add it.

4. Now you can add this device in Plant Manager > DMI Devices.
